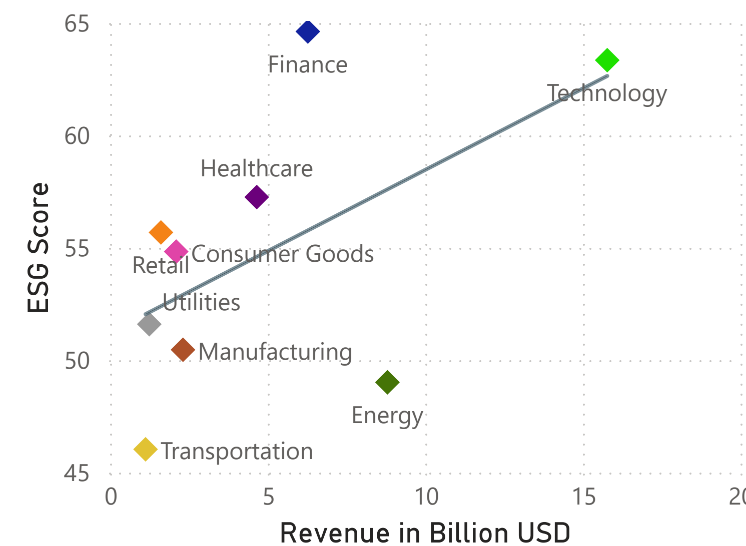
Average Revenue vs ESG Score by Industry



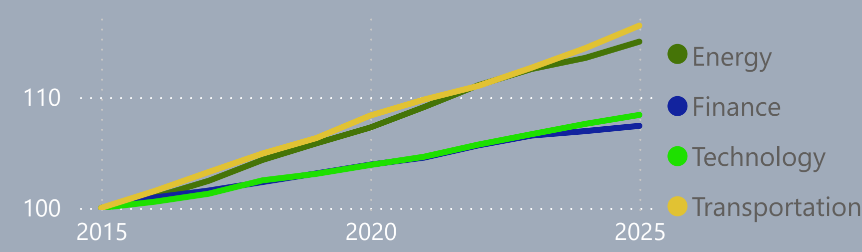
Business Insights & Implications

Analysis based on correlation and variance decomposition techniques

Key Findings

- Average ESG performance increased by 12% overall (1.18% annually)
- Technology and Finance show the highest ESG performance but slowest growth
- Transportation and Energy experienced the strongest ESG growth

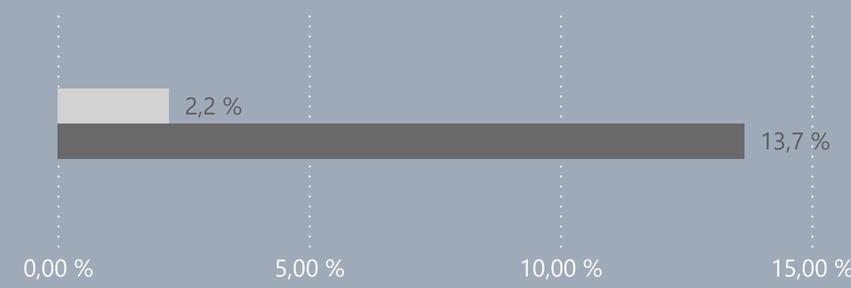
Indexed ESG and Overall Indexed ESG by year and industry



Revenue & ESG Relationship

- Company size has only a weak relationship with ESG performance
- Industry characteristics explain more ESG variation than financial scale
- Wide ESG variation persists even within industries

Industry explains ~6× more ESG variation than revenue



Business Implications

- Financial success and ESG performance are not mutually exclusive
- ESG improvement opportunities differ substantially across industries
- ESG initiatives should be tailored by industry rather than relying on company scale
